CLINICAL STUDY PROTOCOL

A Phase 3, Randomised, Double-Blind, Placebo-Controlled Study of Drug Q in Adults with Moderate Chronic Example Disease

Protocol Number:	QX-301
Sponsor:	Example Pharma Ltd (fictional)
Version:	2.0
Date:	12 March 2026
Phase:	Phase 3

CONFIDENTIAL

1. INTRODUCTION

This section describes the background and rationale for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

1.1 Background

This section describes the disease background for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

This section describes the unmet medical need for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages. The assessment schedule is provided in Table 2.

2. OBJECTIVES AND ENDPOINTS

Table 1: Objectives and Endpoints

Objective	Endpoint	Timepoint
Primary: To compare the efficacy of Drug Q with placebo	Change from baseline in disease activity score	Week 12
Secondary: To evaluate the safety and tolerability of Drug Q	Incidence of treatment-emergent adverse events	Week 16
Secondary: To characterise pharmacokinetics	Trough plasma concentration of Drug Q	Week 8

This section describes the estimands for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

3. STUDY DESIGN

This section describes the overall study design for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

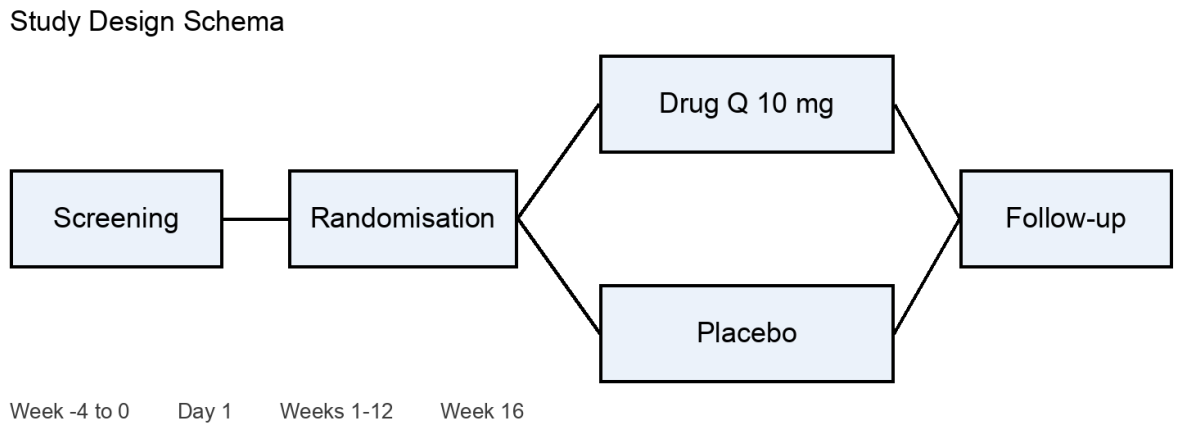

Figure 1: Study Design Schema

4. SELECTION OF SUBJECTS

4.1 Inclusion Criteria

1. Male or female participants aged 18 to 75 years at the time of consent.
2. Diagnosis of chronic example disease for at least 6 months before screening.
3. Able to understand and sign the informed consent form.

4.2 Exclusion Criteria

1. Any prior exposure to Drug Q or another drug of the same class.
2. Clinically significant abnormal ECG at screening.
3. Pregnancy or breastfeeding.

Table 2: Schedule of Activities

Assessment / Procedure	Screening	Treatment Period				Follow-up
		Day 1	Week 4	Week 8	Week 12	
Informed consent	X					
Inclusion/exclusion criteria	X	X				
Physical examination	X	X			X	X
Vital signs	X	X	X	X	X	X
12-lead ECG a	X	X		X	X	
Haematology and chemistry	X	X	X	X	X	X
PK blood sampling b		X	X		X	
Study drug dispensing		X	X	X		
Adverse event review		X	X	X	X	X

a. ECG performed in triplicate, at least 5 minutes apart.

b. Pre-dose sample only.

Abbreviations: ECG = electrocardiogram; PK = pharmacokinetics; X = required procedure.

5. STATISTICAL METHODS

5.1 Sample Size

This section describes the sample size determination for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

5.2 Analysis Populations

This section describes the analysis populations for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

6. REFERENCES

Left column. This section describes the first reference list column for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.

Right column. This section describes the second reference list column for the synthetic study QX-301. The text is fictional and exists only to test document processing. Each paragraph spans several lines so that paragraph grouping, reading order and line joining can be verified across digital and scanned pages.
